DataCountSheet	Sheet name in the Input File for registration where the key field in the header is entered.□	Yes
Commit	Flag with or without commit (X: Execute Commit, Non-X : Do Not Commit) If this item is set with "X", BAPI_TRANSACTION_COMMIT will be executed. (Note: If Commit is performed inside the function module, even if you remove this flag, Commit will be executed)	
AfterExecutionXamlPath	Operation XamlPath after function module execution * Since the operation result is different depending on the function module, normal / abnormal execution check is performed in the configured Xaml, after execution. CheckExportReturnType.xml · · · Return is the type of Export CheckTableReturnType.xml · · · Return is the type of Table CheckNotReturnType.xml · · · Return does not exist in return value	Yes
ResultObjectName	Execution result check object name	
LongText	Flag for long text format input value (X : long text input, Other than X : no input) * As shown in the left screen, from a single entry screen, when you enter a Items that require a button click to enter a long text format value Select Yes only if there is.	

5. Important Notes

- SAP GUI is installed
- SRC_Common is saved together
- Logged on SAP
- Save the Input File for function module execution
(Create input file in the same format as Input File for BAPI execution.) In the Sample Files folder, there is a sample sheet for running the function module: PRELIMINARY_POSTING_FB01, please refer to it.)
