

Explanatory Material [SRC_CM_GET_TBL_E]

1. Function Overview

This function extracts SAP table data from the general table display screen and outputs the data based on the input information.

2. Function Diagram

3. How to use

<Input>

Property	Type	Description	Required
in_ArgumentFilePath	String	Argument file name and save location (set the relative or full path.)	Yes
in_dt_SingleData	DataTable	Single criteria for table data extraction	
in_dt_MultipleData	Dictionary<String,DataTable>	Multiple criteria for table data extraction	

<Output>

Property	Type	Description
out_dt_SearchResult	DataTable	Data table for output

4. Reference

The input of Argument file is as follows:

Sheet : Settings

Property	Description	Required
InputFilePath	Input File name and save location (set the relative or full path.)	Yes
ResourceFilePath	Resource File name and save location (set the relative or full path.)	Yes
ScreenshotsFolderPath	Error screenshots save location (set the relative or full path.)	Yes
LogFolderPath	Log file save location (set the relative or full path.)	Yes
LogFileName	Log File Name (Timestamp is added to the beginning of the file name.) Example: 190722_114045_SRC_Result.log	Yes
in_TableName	Target search Table Name	Yes
in_OutputNumber	Maximum number of outputs when extracting data	Yes
in_MulEnt	If you want to extract under multiple conditions, set "X"	
in_InputCategory	How to get table data search criteria Input category (1 or 2 or 3 or 4) 1.Excel File 2. Data table 3. No condition specified 4.Variants	Yes
in_InputFileSheet	Sheet name of input file * Conditional required item in_InputCategory(In Category)= 1 (Required case)	Conditional
in_OutputCategory	OUT Category (1 or 2 or 3 or 4) Depending on the type of output, select one of the following: 1.Text 2. Data table 3. Spreadsheet (.xlsx) 4. Spreadsheet (.mhtml)	Yes

Explanatory Material [SRC_CM_GET_TBL_E]

in_OutputFilePath	Directory + File Name of the output file destination * Conditional required item in_OutputCategory(OUT Category)= 1 or 3 (Required case)	Conditional
in_Variant	Variant (Use if you have registered criteria input as a variant in advance) * Conditional required item in_InputCategory(In Category)= 4 (Required case)	Conditional
in_TemporaryFilePath	Temporary output text file path when outputting in DataTable format * Conditional required item in_OutputCategory(OUT Category)= 2 (Required case)	Conditional

5. Important Notes

- When outputting in Data Table format (in_OutputCategory = 2)
After pressing the "Change Settings" button at the top of the General Table Display screen, you need to check the "Technical Name as Column Heading" item.

After outputting to tab delimited text, it is converted to DataTable by "ReadCSV", so if the result data contains double quotes, the data cannot be imported properly.
When outputting data containing double quotes, correct the following points.
ExportTypeDataTable.xml
Read CSV Tab Text To DataTable
Option: [Ignore quotes] => True
- Do not start Excel when executing.
- The Workflow Template provided in "Common Reusable Components" of UiPath Connect Marketplace, saved in the "SRC_Common" folder, when using UiPath Reusable Component for SAP ERP, you must save it together.
- When extracting input data from the Excel file, please set the Item Name, From value, and To value so that you can see the search condition.

Reference: Example of input file input

Single condition

Example: Table KNA1, when extracting data

	A	B	C
1		From	To
2	KUNNR	101010	
3	LAND1	DE	

Multiple conditions

Example: Table KNA1, when extracting data

	A	B	C
1	From	To	
2	101010	101030	
3			

KUNNR

LAND1

In column A, enter the field name.

Enter the field name in the sheet name.

After logging into SAP, please check the field name of each table from Tr-Cd:SE11.
