

Explanatory Material [SRC_LoadExcelData]

1. Function Overview

Load registered data from Excel file such as Input File.
It is assumed that it will be used in calls from other workflows.

2. Function Diagram

* Function Overview

1. Read Input File and save the information of each sheet in DataTable.
* Save each sheet name (except SRC_Log) of Input File in the list.

2. Read the selector file and save the information of each sheet in DataTable.
* Make sure that the column name and number of items in each sheet of the input file and selector file are exactly the same.

3. How to Use

<Input>

Argument Name	Type	Description	Required
in_InputFilePath	String	Input file save destination and file name (Set the relative path or complete path.)	Yes
in_SelectorFilePath	String	Selector file save destination and file name (Set the relative path or complete path.)	Yes

<Output>

Argument Name	Type	Description
out_SheetNames	List<String>	Each sheet name information of Input file.
out_InputData	Dictionary<String, DataTable>	Input file value information of each sheet of Input file.
out_SelectorData	Dictionary<String, DataTable>	Selector File sheet input item selector information.

4. Important Notes

- Save it in the SRC_Common folder.
- Do not start Excel when executing.
