3. How to use

Overview

After execute this workflow a Data Files for input (Input file and Selector file) are created automatically by clicking the necessary fields on SAP screen.

- Get the Field Name on the left side of the selected item. (Shown as above marked in red)
(As for the items where Field Name can not be acquired, a pop-up to input the desired Field Name is displayed)
- The object can be acquired when the selector name initiate with "ctxt", "txt", "cmb", "chk", "tbl" or "rad".
Ex. Material Master Registration Screen - Material Code <wnd app='saplogon.exe' cls='SAP_FRONTEND_SESSION' title='*' /><sap id='usr/cbtxRMMG1-MATNR' />
Dialog box, Pop-up box and others are not covered. Acquisition of these objects can throw an error.
In this case press [ESC] to turn off the acquisition mode and re-enable it after transit the screen from popup or dialog box.
Also, in case the object can not be acquired, refer to the Sample Workflow Data File.
- To move to next screen, press [ESC] key.
[Do you proceed to the next screen?] message is displayed. After move to the next screen of SAP ERP press [YES] in the dialog box.
When [Please input the sheet name of export file.] message is displayed, enter the desired sheet name. After that you can continue acquiring selectors for next screen.
- When selector acquisition is completed for all screens, press [ESC] key and when [Do you proceed to the next screen?] message is displayed, press [NO] to finish the process.
Success completion message is displayed and the Input File is created inside the configured folder.

4. Important Notes

- Save it in the SRC_Common folder.
- The Workflow Template provided in "Common Reusable Components" of UiPath Connect Marketplace, saved in the "SRC_Common" folder, when using UiPath Reusable Component for SAP ERP, you must save it together.
- Log on to SAP and move to The information acquisition screen.
