

[Sample_SRC_CYCLE_SEGMENT_CRT_E] Explanatory Material

1. Overview

Sample Workflow for registering periodic cycles and add segments using "SRC_CYCLE_CRT" and "SRC_SEGMENT_CRT".

2. How to use

- Log on to SAP
- Make sure all Excel applications are closed
- Enter the xaml file path and the Argument file path in ContinuousExecution.xlsx in the order of execution.
- Each data folder is stored in the SRC_CYCLE_CRT and SRC_SEGMENT_CRT folders.
Check the following and input in the Argument file (Arg-SRC_CYCLE_CRT_E (EN) .xlsx or Arg-SRC_CYCLE_CRT_E (EN) .xlsx).
When adding a segment, object information (selector) is changed even for the same item according to the input value.
(In this sample, 2 patterns are saved)
- Input the periodic cycles and segment information in the Input file saved with the same data folder.

Property Name	Description
InputFilePath	Input File save destination and file name (Set the relative path or complete path.)
SelectorFilePath	Selector data file save destination and file name (Set a relative or complete path.)
ResourceFilePath	Resource data file save destination and file name (Set a relative or complete path.)
ScreenshotsFolderPath	Error screenshot file save location and file name (Set the relative path or complete path.)
LogFolderPath	Log data file save destination (Set a relative or complete path.)
LogFileName	Log data file name (The time stamp is added to the beginning of the file name. Example: 190722_114045_SRC_Result.log)

Execute **Sample_SRC_CYCLE_SEGMENT_CRT.xaml**.

Processing is executed in the order described in ContinuousExecution File.

3. Folder structure

/ Sample_SRC_CYCLE_SEGMENT_CRT_E	
Sample_SRC_CYCLE_SEGMENT_CRT_E.xaml	
ContinuousExecution.xlsx	-> Enter the xaml file path and the Argument file path in the order of execution
/ SRC_CYCLE_CRT_E	
SRC_CYCLE_CRT_E.xaml	
Each xaml file	-> Contains necessary xaml files that are invoked from SRC_CYCLE_CRT.xaml (xaml for Main processing)
/Data
